BUILD BLUEPRINT · AI NUTRITION APP

Wellness Classifieds & Marketplace

A reviewed marketplace for TriggerMD, XIMMD and approved wellness businesses, added to the nutrition app as a fifth tab: **Market**.

PREPARED FOR	TIMELINE	TARGET GO-LIVE
Benjamin	4 weeks · Sun 18 Oct – Sat 14 Nov 2026	Fri 13 Nov 2026

STACK	DOCUMENT DATE	STATUS
Lovable (React + Vite + Tailwind) · Supabase	Fri 23 Oct 2026	Week 1 nearly complete

All dates are estimates. They assume timely access to the Lovable project and Supabase, verified brand content from TriggerMD and XIMMD, and legal review turnaround within Week 3.

1. Overview

The marketplace combines a **wellness shopping directory**, a **classified advertising platform** and a **referral marketplace** inside the existing nutrition app. It promotes the owned brands TriggerMD and XIMMD, and later lets approved wellness businesses advertise their services.

> **Guiding principle:** the app's nutrition recommendations stay independent from paid promotion. No meal plan, weight, goal or health data is used to choose, rank or target marketplace content, and the AI nutrition assistant never recommends marketplace items.

5
bottom-nav tabs: Home · Meals · Progress · Market · Profile

7
marketplace categories

6
listing statuses with enforced review

4
weeks to go-live

Goals

- Give TriggerMD and XIMMD prominent brand pages in a clearly labelled **Featured Partners · Sponsored** section.
- Let verified dietitians, coaches, fitness and wellness businesses apply, submit listings and receive inquiries.
- Make sure no listing goes live without human review, with a full audit trail.
- Measure performance with privacy-safe aggregate analytics (clicks and inquiries).

Scope

In scope

- Market home, category, brand and listing pages
- Vendor application and vendor portal
- Admin review console (queue, vendors, brands, analytics)
- User-initiated inquiries with explicit consent
- Outbound links to TriggerMD, XIMMD and partner websites
- Supabase schema, security rules and approval workflow

Out of scope (by design)

- In-app checkout or payments: purchases happen on brand sites
- Prescription medications sold as products
- Promoting treatments based on a user's condition or weight
- Vendor self-publishing or self-labelling as "sponsored"
- Tracking which individual user clicked which listing

Marketplace categories

CATEGORY	PRODUCTS OR SERVICES
Telehealth	TriggerMD, virtual consultations, approved medical programs
Wellness products	XIMMD, eligible supplements and wellness merchandise
Weight management	Educational programs, nutrition coaching, meal-planning services
Fitness	Workout memberships, equipment and digital courses
Books & education	Nutrition guides, health books and instructional resources
Wellness providers	Dietitians, nutrition coaches and other verified professionals
Events & programs	Wellness seminars, online workshops and health events

2. Architecture & app structure

Nutrition app (Lovable)

React · Vite · Tailwind · React Query. The Market module adds its own routes and components and doesn't change existing Meals or Progress code.

Supabase

Postgres with Row Level Security, Auth (the existing app login), Storage for listing images, Edge Function for inquiry emails, pg_cron for auto-expiry.

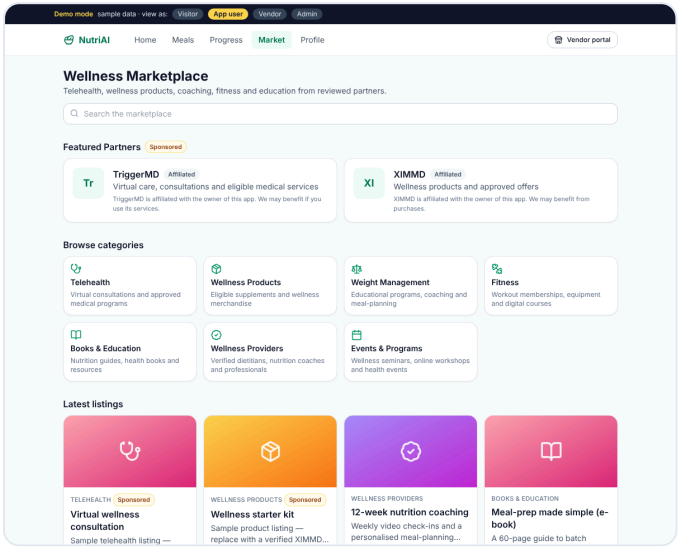

Brand websites

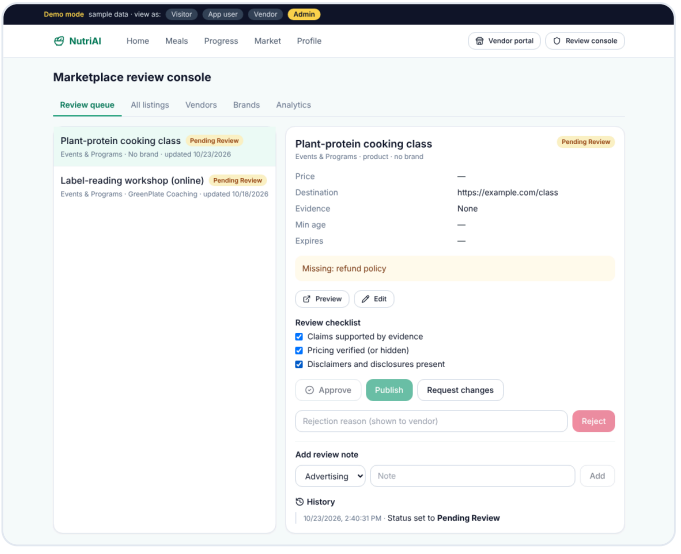

TriggerMD, XIMMD and partner sites receive outbound clicks (with UTM tags). Purchases and clinical intake happen there.

Screens and routes

ROUTE	WHO	PURPOSE
`/market`	Everyone	Search, Featured Partners (sponsored, with affiliation disclosure), category grid, latest listings, "Advertise your business"
`/market/category/:slug`	Everyone	Listings in a category, with filters by type and price and sorting
`/market/brand/:slug`	Everyone	Brand pages for TriggerMD and XIMMD: logo, description, disclosure, "Visit" button, listings
`/market/listing/:slug`	Everyone	Full listing: price (only when verified), how it works, eligibility and age, ingredients, shipping and refunds, evidence, disclaimers, call-to-action button, "Ask a question"
`/market/vendor`	Signed-in users	Apply as a vendor; once approved, create, edit and submit listings, see clicks and inquiries
`/admin/marketplace`	Admin / reviewer	Review queue with checklist, approve, publish or reject, review notes and history, vendors, brands, analytics, expiry

What's built so far (as of 23 Oct)

Left: Market home with Featured Partners and categories. Right: admin review console with checklist-gated publishing. Screens show demo data.

3. Data model & approval workflow

TABLE	PURPOSE	WHO CAN WRITE
`marketplace_brands`	TriggerMD, XIMMD and partner brands; featured flag; affiliation disclosure	Admin / reviewer
`marketplace_categories`	Seven categories, icon and display order	Admin / reviewer
`marketplace_listings`	Products, services, programs and events: prices, images, destination URLs, eligibility, evidence, disclaimers, status	Vendor (own drafts) · Reviewer (status, sponsored, price-verified)
`marketplace_clicks`	Daily aggregate click counts per listing; no user IDs	Only via the `record_marketplace_click()` function
`marketplace_inquiries`	User-initiated questions; consent required	Signed-in user (own)
`marketplace_vendors`	Business accounts, credentials and approval status	Applicant (pending only) · Admin (approve/suspend)
`marketplace_reviews`	Advertising, regulatory, clinical and legal review history; every status change logged automatically	Reviewer · database trigger
`user_roles`	Admin and reviewer roles	Set in Supabase by the owner

Listing lifecycle

Draft → vendor submits → **Pending Review** → reviewer → **Approved** → **Published** → end date → **Expired**

Pending Review → reviewer → **Rejected** (reason shown to vendor) → vendor edits → resubmits

Enforced in the database, not just the UI

- Only **Published** listings that haven't expired are visible to the public.
- Vendors can set only Draft or Pending Review. Approve and Publish are refused for vendors.
- Vendors can't mark listings as sponsored or price-verified, or approve their own vendor account.
- Any vendor edit to a live listing automatically sends it back to Pending Review.
- Every status change is written to `marketplace_reviews`, which forms the audit trail.

These rules were tested on PostgreSQL 16 and in an end-to-end browser test, and all checks passed.

Compliance guardrails

- **Disclosure:** owned brands are labelled "Affiliated" and featured items "Sponsored", with disclosure text on cards, brand pages and listings.
- **Regulated listings** (telehealth or prescription-adjacent) need a legal and advertising review sign-off in the checklist, and they always show a "licensed third party / not medical advice" notice.
- **No condition-based targeting:** TriggerMD services are never promoted from a user's medical condition or weight data. Any future personalised clinical referral needs its own clinical process and explicit consent.
- **Claims:** product claims need supporting evidence. Prices are shown only once a reviewer verifies them.
- **Privacy:** clicks are anonymous daily totals. Inquiries share only the name, email and message the user typed, after they tick the consent box.

4. Four-week timeline (18 Oct – 14 Nov 2026)

Milestones

#	DATE	MILESTONE	DONE WHEN
M1	Sat 24 Oct	Database & module built	Schema applied in a test database, module builds, flows pass end-to-end **On track**
M2	Sat 31 Oct	Market live inside the app (staging)	Market tab works in the Lovable app with real login; owned-brand pages show verified content
M3	Sat 7 Nov	Websites connected & compliance approved	Outbound tracking live; legal and advertising sign-off on TriggerMD/XIMMD listings; policies updated
M4	Fri 13 Nov	Public launch	QA passed; owned brands plus pilot vendors published; monitoring in place

5. Week-by-week plan

Week 1 · Foundations

Sun 18 – Sat 24 Oct

DATES	TASK	STATUS
18–19 Oct	Confirm scope, categories, brand requirements and compliance rules	Done
19–21 Oct	Supabase schema: 7 tables, statuses, roles, security rules, workflow triggers, seed data	Done
20–23 Oct	Market module UI: home, category, brand, listing, vendor portal, admin console, analytics	Done
22–23 Oct	Database security tests, end-to-end browser tests, demo mode with sample data	Done
23–24 Oct	Blueprint, Lovable prompt and handover notes	In progress

Week 2 · Integration & owned brands

Sun 25 – Sat 31 Oct

25–26 Oct	Connect the Lovable project to GitHub; merge the Market module into the existing app	Planned
26 Oct	Apply the migration to the production Supabase project; assign admin and reviewer roles	Planned
26–27 Oct	Use the app's existing login, profile and navigation (5-tab bottom nav)	Planned
27–28 Oct	Image uploads for logos and listings (Supabase Storage bucket and policies)	Planned
28–30 Oct	TriggerMD and XIMMD brand pages and first listings with **verified** copy, prices and evidence	Planned
31 Oct	Week 2 demo and feedback round	Planned

Week 3 · Websites, compliance & vendors

Sun 1 – Sat 7 Nov

1–2 Nov	Connect websites: outbound links with UTM tags to TriggerMD and XIMMD; landing pages confirmed	Planned
1–5 Nov	Legal and advertising review of telehealth and wellness-product listings and disclaimers	Planned
2–3 Nov	Inquiry email notifications to vendors (Supabase Edge Function)	Planned
3–5 Nov	Privacy policy update, vendor terms, sponsorship disclosure wording	Planned
5–6 Nov	Nightly auto-expiry (pg_cron); polish analytics	Planned
6–7 Nov	Vendor onboarding kit; invite 3–5 pilot vendors (dietitians, coaches, fitness)	Planned

Week 4 · QA, pilot & launch

Sun 8 – Sat 14 Nov

8–10 Nov	QA: end-to-end flows on real Supabase, security-rule checks for each role, mobile and accessibility	Planned
9–11 Nov	Pilot vendors submit listings; review queue run end-to-end	Planned
11–12 Nov	Bug fixes, content freeze, launch checklist sign-off	Planned
13 Nov	**Go-live:** Market tab enabled for all users	Planned
14 Nov	Post-launch check of errors, clicks and inquiries; plan the next phase	Planned

6. Roles, risks & open items

Responsibilities

ROLE	RESPONSIBILITIES
Owner (Benjamin)	Approve scope; supply verified TriggerMD and XIMMD content, logos, prices and evidence; grant Lovable and Supabase access; final launch decision
Developer	Integration, Supabase setup, website connection, notifications, QA fixes
Marketplace reviewer	Work the review queue with the checklist; approve vendors; keep disclosures accurate
Legal / compliance adviser	Review regulated listings, disclaimers, privacy policy and vendor terms before publishing

Risks & mitigations

RISK	MITIGATION
Legal review of telehealth listings takes longer than planned	Launch with XIMMD, education and provider listings first; TriggerMD listing goes live as soon as it's signed off. The workflow supports this.
Verified brand content arrives late	Brand pages hide unverified prices automatically; content deadline Thu 29 Oct
Conflicts merging into the existing Lovable app	The module is self-contained (own routes, components and tables); merge on a branch and test before switching over
Perceived bias between recommendations and ads	Strict separation: no health data used, visible sponsorship labels, independence note on the Market page
Low early vendor take-up	Start with owned brands plus a hand-picked pilot group; vendor onboarding kit

Open items needed from you

- Access to the Lovable project, connected to GitHub, and to the Supabase project.
- The rest of the original spec: section 6 "Connect your websites" and the two linked ChatGPT conversations.
- Verified TriggerMD and XIMMD descriptions, logos, service areas, eligibility, prices, ingredients and evidence.
- Name of the legal or advertising reviewer and their expected turnaround time.

Launch checklist

- Migration applied to production; admin role assigned
- Owned-brand pages show verified content and disclosures
- All live listings reviewed with full checklist
- Regulated listings have legal sign-off recorded
- Security rules tested for visitor, user, vendor and admin
- Privacy policy and vendor terms published
- Outbound links tracked; inquiry emails delivered
- Mobile layout and accessibility checked
